

Project Proposal

Deadline: 2022-03-04 by 11:59 PM

As part of the course, you are required to submit a project proposal highlighting the following key points:

- Name, student number and email address of each group member.
- The topic of the project and the problem that your proposed solution will address.
- The motivation behind selecting the proposed project.
- How your project is related to “Artificial Intelligence” in general.
- The approach you are planning to take. For example:
 - Suppose you are planning to conduct experiments using different machine learning algorithms to answer the problem you have identified. In that case, you can briefly mention the dataset you plan to use, the algorithms and the evaluation metrics.
 - If you are conducting a literature survey within the boundaries of AI, the area in which your research will be focused, the approach you will be taking to collect the papers, etc.
- Planned contribution of each group member.

The primary purpose of the proposal is to identify whether you have selected a project related to AI and make sure that your project has progressed accordingly. 5% of total marks will be allocated to the proposal, and you are only required to submit a few paragraphs(not more than one page) that cover the points mentioned above.

You can submit your document in brightspace under your group.

I will provide you with feedback within the following 2-3 days.
